#### *File Sharing and Storage from Mangomind*

Mangomind offers two Internet file sharing and online storage services for small businesses looking to offload some hardware ownership and associated management. The two offerings, Mangomind Drive and Mangomind Enterprise, employ 128-bit encryption of transferred and stored files for the remote-access security needs of telecommuters and mobile employees; the encryption is performed by RSA Security.

Drive administrators invite colleagues and partners into a drive, at which point users install the drive onto their client machines. Users can set up folders with customized features such as password protection. The Mangomind Drive multiuser Internet file sharing and online storage service consists of a five-user drive with 50Mbytes of storage. Mangomind Enterprise furnishes 10Mbytes of storage for each user, with internal drive administration capabilities and the option of purchasing additional storage. The service provides an unlimited number of seats.

The Mangomind Drive service runs \$14.95 per month, and the Mangomind Enterprise service costs \$14.95 per seat per month.
