

Mangomind delivers the security, reliability, and ease of use essential for business.

Secure – end-to-end file encryption security; user authentication; file access controls – a cost effective alternative to a VPN

Easy - Windows operation; no software to learn; no training required – use your Windows applications like you do today

Reliable – work together on documents in real time and access documents when not connected to the Internet – off-site file backup and restore capability

The Secure, Shared Internet Workspace for Global Workgroups

Mangomind is a shared Internet workspace that provides an easy way for mobile professionals, teleworkers, and others to access, store and share documents and databases with workgroup members located anywhere in the world. Mangomind operates with the ease of Windows and without the cost and complexity of a VPN.

Simply create your Mangomind Drive, save, copy or drag and drop files onto the drive, and invite others to access and share the information.

- Communicate critical information faster
- Collaborate with anyone outside the company more efficiently than email attachments
- Easy-to-use Windows operation
- Increase productivity – work on files when not connected to the Internet
- Securely exchange files without the costs and complexity of a VPN
- Always have a back-up of your business critical files
- NEW – share databases with multiple users online

Mangomind Workgroup consists of a single, secure Mangomind Drive for up to 5 users with 50 megabytes of managed Internet storage. The Mangomind Drive is ideal for small workgroups within any size enterprise.

"We find Mangomind to be one of those simple and effective technologies that save us both time and money. As part of our virtual office collaborative environment, we use Mangomind to effectively give us a shared, managed workspace, without the physical IT infrastructure that is normally needed."

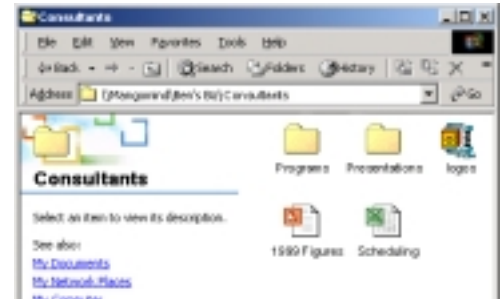

Prem Sundaram, Consulting Partner of The Strategics Group.

Improve Workgroup Productivity

Remote file access: Mangomind lets you and your colleagues access your business critical files from anywhere, at any time, from any computer. All you need is an Internet connection and a computer to access your shared workspace.

Multi-user file sharing: Your entire workgroup can access documents and databases simultaneously at any time. And team members always work on the most up to date documents.

End-to-end file security: Mangomind incorporates the most rigorous Internet security technology and protocols to ensure that only authenticated users can access documents:

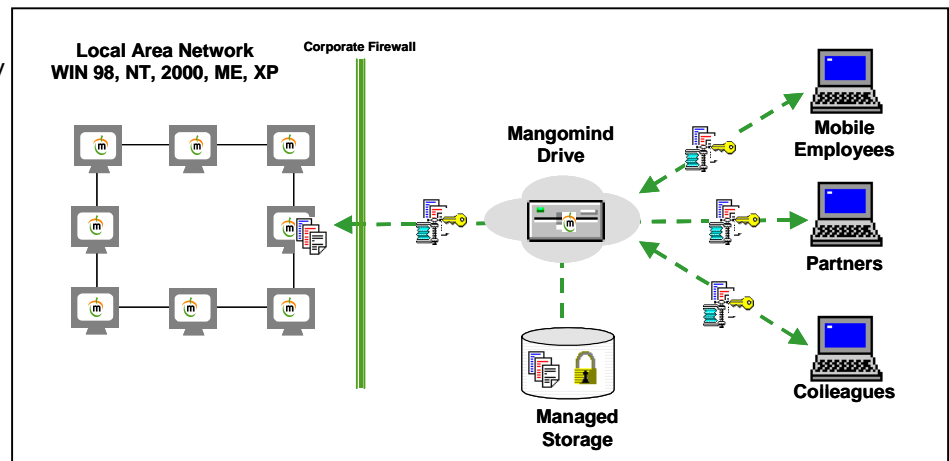

A Mangomind Drive has a Windows look and feel, and operates just like a Windows "C" drive.

-Files are protected by 128-bit encryption (RSA Security) while they are transferred and while they are stored on a Mangomind server in a secure Internet Data Center (WorldCom).

-Public/private key encryption ensures user authentication.

-Files and folders can be further protected with file access controls and permissions.

The Mangomind Internet File Sharing Service

Offline access to files:

Workers can access Mangomind files even when they are not connected to the Internet. In a hotel, on a plane, no Internet connectivity? Work on files offline and changed files are automatically synchronized to the Mangomind Drive when you reconnect to the Internet.

Create private workgroups: Assign access permissions to files and folders to create discrete workgroups. Hide user identities to ensure privacy.

Secure messaging: Send messages instantly to others on your shared Mangomind Drive via a notice board. Your colleagues are alerted when a new message is received.

Easy to use Windows operation: As a true Windows file system, Mangomind operates just like a Windows "C" drive. Create, copy, and save files just like you normally would. In fact, you don't need to change anything about the way you typically work. No user training is required.

Secure data back-up service: All files stored on a Mangomind Drive are backed-up and recoverable at the secure Internet Data Center.

Supports all Windows platforms: Mangomind works on any PC running Windows 95, 98, ME, NT, 2000, or XP with at least 32 MB RAM, any web browser, and email access.
