

MangomindSM, The Business Internet File ServiceTM Improving Productivity within a Brokerage Workgroup

Mangomind, the Business Internet File Service, combines the familiarity of Windows applications with the power of the Internet to deliver a secure, easy way for multiple users to share and store important business files.

Mangomind Features

✦ **Simultaneous, multi-user access**

Mangomind is the only Internet file-sharing service that allows users located in any location to simultaneously access and share files.

✦ **Robust, safe and secure**

Data encryption (128-bit) at the client (user) ensures that all files are securely transmitted and stored. Access permissions can be set on all drives, files, and folders, ensuring that the correct users have access to confidential files. Service Level Agreements ensures that valuable business files are available and protected.

✦ **Familiar Windows interface**

Mangomind looks and operates just like local drives and are completely integrated into Windows. No user training is required; applications run as if they were on a local drive.

✦ **Access anytime, even when offline**

When disconnected from the Internet, users can continue to work on their files offline. Mangomind automatically synchronizes the files when the user reconnects to the Internet.

✦ **Secure file sharing without a VPN**

Mangomind provides the secure file-sharing benefit of a VPN, without the additional hardware and configuration complexity.

Mangomind Benefits within a Brokerage House

✦ Real-time file sharing - In monitoring clients' accounts, it is necessary to regularly create performance reports, asset allocations and account audits. With Mangomind, members of the workgroup can collaborate on daily project activities to create the required reports, and easily and instantaneously distribute the final product to the appropriate clients. This saves the time previously spent on producing reports, and then printing, mailing and faxing them to clients.

✦ Streamlined Business Processes - Brokers are regularly in contact with many separate money managers as well as clients and trustees. They collect performance measures from each money manager and create monthly performance reports and asset allocations for themselves and their clients. Mangomind provides the means to electronically collect performance information from money managers and distribute the time sensitive monthly and quarterly reports to clients.

✦ Long distance Real-time Interconnectivity - Brokers regularly meet with clients and money managers at their remote offices. The workgroup requires constant lines of communication across long distances. Mangomind provides workgroups the ability to share information and communicate in real-time across long distances.

✦ Research Dissemination - Brokers need to deliver research to money managers in a real-time, orderly and systematic manner. Mangomind provides brokers the ability to easily designate which managers are to receive particular research reports.
